

OPERATION FIRST STEP

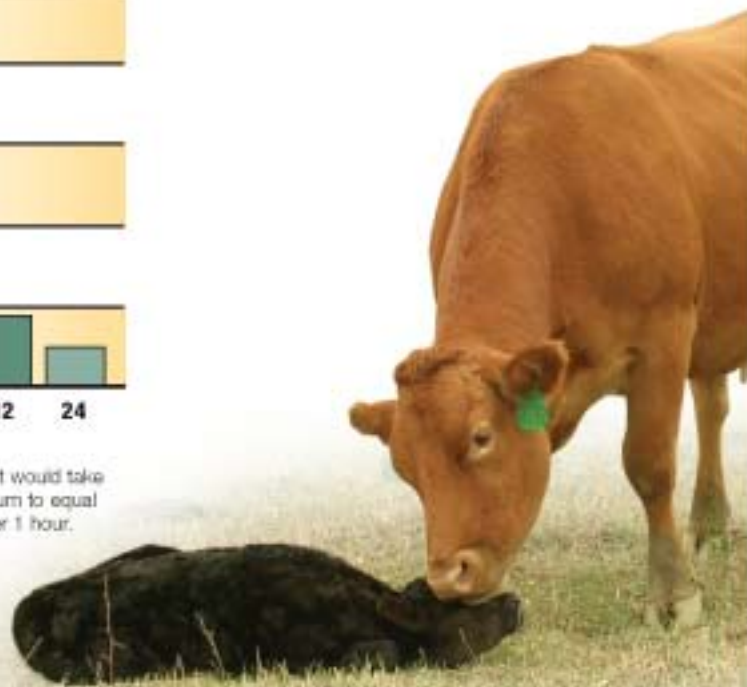

for newborn calves

Whenever a calf is born, time is critical. Newborn calves need to get on their feet and get colostrum into their immature immune systems within the first few hours of life if they are going to obtain the passive immunity they need. Whether nursing its mother or hand-fed in a calf hutch, every newborn calf needs Nursemate ASAP. It is Operation First Step for newborn calves.

Hours After Birth
At 6 hours after birth, it would take twice as much colostrum to equal the absorption at under 1 hour.
