

OPERATION FIRST STEP

for newborn calves

Farmers and ranchers have depended on Nursemate for over 15 years.

Here's what some of them have to say:

"We use quite a bit of Nursemate ASAP, especially on weak calves, and have had real good results"

Illinois beef producer

"Nursemate increases calf vigor, gets them sucking"

Kansas beef producer

"We see it as an easy way to get colostrum in a newborn calf"

Iowa beef producer

"We use it on calves from first calf heifers or other calves that don't know how to suck right away. It has saved a lot of calves for us."

South Dakota beef producer

"From my own experience and from what my clients tell me, calves under stress that are given Nursemate at birth have far less scours and pneumonia than those that don't get it. In our own herd, any calf that's pulled, chilled or stressed in any way, gets a tube of Nursemate. Whenever I have to treat a sick calf, I know it didn't get Nursemate Colostrum."

Dr. Joe Poindexter, DVM, South Dakota

"We use it on all our client's questionable calves in the first 12 hours after they are born. We are in the seedstock business so we use Nursemate on the majority of the calves as a little extra insurance."
